Audit Updates

Initial Audit	4th May 2022
Corrected	

Contract Analysis

Critical Medium Minor Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

BC - Blacklisted Contracts

Criticality	medium
Location	contract.sol#L2564

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `blacklistMalicious` function.

```
require(
    !_isBlacklisted[from] && !_isBlacklisted[to],
    "Blacklisted address"
);
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

Critical Medium Minor

Severity	Code	Description
	L01	Public Function could be Declared External
	L02	State Variables could be Declared Constant
	L04	Conformance to Solidity Naming Conventions
	L05	Unused State Variable
	L06	Missing Events Access Control
	L07	Missing Events Arithmetic
	L09	Dead Code Elimination
	L13	Divide before Multiply Operation
	L14	Uninitialized Variables in Local Scope
	L15	Local Scope Variable Shadowing

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L357,361,372,380,1084,1093,1243,1251,1268,1300,1313,1330,1353,1382,1409,1750,1772,1798,1806,1830,1994,2070,2131,2153,2338,2481,2528,2625,2695,2723,2756,2760,2764,2773,2779,2783,2787,2791,2795,2799,2803,2807,2811,2815,2819,2823,2829,2835,2841,2847,2859,2863,2867,2871,2902

Description

Public functions that are never called by the contract should be declared external to save gas.

```
withdrawFromWallet
compoundNode
getTotalCreatedNodes
getTotalStakedReward
publiDistriRewards
distributeRewards
getNodesLastClaims
getNodesRewards
getNodesCreatime
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L1911,2380,2386

Description

Constant state variables should be declared constant to save gas.

```
numberOfLoops
deadWallet
lastDistributionCount
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L48,53,674,912,914,945,2050,2070,2131,2153,2168,2181,2199,2225,2252,2266,2292,2318,2322,2326,2330,2334,2338,2346,2350,2395

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_isBlacklisted
_distributeRewards
_isNodeOwner
_getNodeNumberOf
_changeGasDistri
_changeAutoDistri
_changeClaimTime
_changeRewardPerNode
_changeNodePrice
...
```

Recommendation

Follow the Solidity naming convention.
https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions

L05 - Unused State Variable

Criticality	minor
Location	contract.sol#L125

Description

There are segments that contain unused state variables.

```
MAX_INT256
```

Recommendation

Remove unused state variables.

L06 - Missing Events Access Control

Criticality	minor
Location	contract.sol#L1933

Description

Detected missing events for critical access control parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
token = token_
```

Recommendation

Emit an event for critical parameter changes.

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L2322,2326,2493,2505,2510,2515,2520,2524

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
rwSwap = value
cashoutFee = value
futurFee = value
liquidityPoolFee = value
rewardsFee = value
swapTokensAmount = newVal
claimTime = newTime
rewardPerNode = newPrice
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L501,533,613,631,577,596,1487,2045,1592,1626,1610,1573,180,185,22,30,48,53

Description

Functions that are not used in the contract, and make the code's size bigger.

```
split
length
_indexOf
toInt256Safe
toUint256Safe
abs
safeTransferFrom
safeIncreaseAllowance
safeDecreaseAllowance
...
```

Recommendation

Remove unused functions.

L13 - Divide before Multiply Operation

Criticality	minor
Location	contract.sol#L2292,2625

Description

Performing divisions before multiplications may cause lose of prediction.

```
rewardsPoolTokens = contractTokenBalance.mul(rewardsFee).div(100)
temp = (48 + uint8(_i - (_i / 10) * 10))
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality	minor
Location	contract.sol#L2741,2102,2712

Description

The are variables that are defined in the local scope and are not initialized.

```
feeAmount
validIndex
```

Recommendation

All the local scoped variables should be initialized.

L15 - Local Scope Variable Shadowing

Criticality	minor
Location	contract.sol#L2419,2625,2871

Description

The are variables that are defined in the local scope containing the same name from an upper scope.

```
name
shares
```

Recommendation

The local variables should have different names from the upper scoped variables.

Summary

Plutus node is a contract that allows users to gain passive income. The users can create nodes that generate $PLUTUS. The more nodes the user has, the higher $PLUTUS reward is. The maximum nodes that can be generated per user are 100. The token has a friendly and growing community. There are some functions that can be abused by the owner, like blacklisting addresses. There are some informative comments that do not affect the contract security. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
