## Audit Updates

<b>Initial Audit</b>	26th January 2022
<b>Corrected</b>	

# Contract Analysis

● Critical
 ● Medium
 ● Minor
 ● Pass

Severity	Code	Description
<span style="color: red;">●</span>	ST	Contract Owner is not able to stop or pause transactions
<span style="color: blue;">●</span>	OCTD	Contract Owner is not able to transfer tokens from specific address
<span style="color: blue;">●</span>	OTUT	Owner Transfer User's Tokens
<span style="color: blue;">●</span>	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
<span style="color: blue;">●</span>	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
<span style="color: blue;">●</span>	MT	Contract Owner is not able to mint new tokens
<span style="color: blue;">●</span>	BT	Contract Owner is not able to burn tokens from specific wallet
<span style="color: gold;">●</span>	BC	Contract Owner is not able to blacklist wallets from selling

## ST - Stop Transactions

Criticality	critical
Location	contract.sol#L486

### Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the `tradingOpen` to false.

```
if (!authorizations[sender] && !authorizations[recipient]) {  
    require(tradingOpen, "Trading is not enabled");  
}
```

### Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

## BC - Blacklisted Contracts

Criticality	medium
Location	contract.sol#L901

### Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `setLocks` function.

```
if (lockingEnabled) {  
    require(  
        !isLocked[sender] && !isLocked[recipient],  
        "Wallet is locked"  
    );  
}
```

### Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

# Contract Diagnostics

● Critical    ● Medium    ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L04	Conformance to Solidity Naming Conventions
●	L07	Missing Events Arithmetic

## L01 - Public Function could be Declared External

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L952,L129,L116 and 1 more

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
tradingStatus  
transferOwnership  
unauthorize  
...
```

### Recommendation

Use the external attribute for functions never called from the contract.

## L04 - Conformance to Solidity Naming Conventions

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L324,L322,L311 and 25 more

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
_feeWallets  
_feeTokens  
_nftHolderSellFees  
...
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

## L07 - Missing Events Arithmetic

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L952,L924,L914 and 4 more

### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
deadBlocks = _deadBlocks  
targetLiquidity = _target  
swapThreshold = _swapThreshold  
...
```

### Recommendation

Emit an event for critical parameter changes.

# Contract Functions

## Summary

Jeet Apes Token is a meme project that claims to provide unique perks by holding the projects' NFTs. The Project has a friendly and growing community. The Smart Contract analysis reported no compiler errors, but showed 1 critical and 1 medium threat issues. There are some functions that can be abused by the owner, like stopping transactions for everyone except the owner, and blacklisting wallets from selling. The maximum fees percentage that can be set is 25%. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.
