## Audit Updates

<b>Initial Audit</b>	4th April 2022
<b>Corrected</b>	

# Contract Analysis

● Critical    ● Medium    ● Minor    ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

## ST - Stop Transactions

Criticality	critical
Location	contract.sol#L533,630

### Description

The contract owner has the authority to stop the sales for all users excluding the owner. The owner may take advantage of it by setting the `_totalTaxIfSelling` to a value greater than 100.

```
else if(isMarketPair[recipient]) {  
    feeAmount = amount.mul(_totalTaxIfSelling).div(100);
```

The contract owner has the authority to sell the holdings for all users excluding the owner. The owner may take advantage of it by setting a high value to `coolBlock`. Hence, the tokens will automatically be burned in the first transaction after the purchase.

```
if(burnFromAnt[sender] > 0){  
    uint theAmount = burnFromAnt[sender];  
    burnFromAnt[sender] = 0;  
    return _basicTransfer(sender, 0x00000000000000000000000000000000dEaD,  
theAmount);  
}  
///  
if(sender == uniswapPair && block.number < genesisBlock + coolBlock){  
    burnFromAnt[recipient] += finalAmount;  
}
```

### Recommendation

The contract could embody a check for not allowing setting the `_totalTaxIfSelling` and `coolBlock` less or more than a reasonable amount. A suggested implementation could check that the maximum amount should be more than a fixed percentage of the total supply.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user

from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

## ELFM - Exceed Limit Fees Manipulation

<b>Criticality</b>	critical
<b>Location</b>	contract.sol#L529

### Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the `setSellTaxes` function with a high percentage value.

```
function setSellTaxes(uint256 newLiquidityTax, uint256 newrepoTax, uint256
newTeamTax) external onlyOwner() {
    _sellLiquidityFee = newLiquidityTax;
    _sellrepoFee = newrepoTax;
    _sellTeamFee = newTeamTax;

    _totalTaxIfSelling = _sellLiquidityFee.add(_sellrepoFee).add(_sellTeamFee);
}
```

### Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

# Contract Diagnostics

● Critical    ● Medium    ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L07	Missing Events Arithmetic
●	L09	Dead Code Elimination

## L01 - Public Function could be Declared External

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L136,141,147,458,462,466,470,478,482,487 and 10 more

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
transferFrom
transfer
changeRouterVersion
getCirculatingSupply
setSwapAndLiquifyByLimitOnly
setSwapAndLiquifyEnabled
setIsExcludedFromFee
setMarketPairStatus
approve
...
```

### Recommendation

Use the external attribute for functions never called from the contract

## L02 - State Variables could be Declared Constant

**Criticality**

minor

**Location**

contract.sol#L354,352,353

### Description

Constant state variables should be declared constant to save gas.

```
_symbol  
_name  
_decimals
```

### Recommendation

Add the constant attribute to state variables that never change.

## L04 - Conformance to Solidity Naming Conventions

**Criticality**

minor

**Location**

contract.sol#L183,184,200,218,557,573,738,362,392,393

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
_walletMax  
_maxTxAmount  
_balances  
_newAirDropFee  
_enabled  
_coolBlock  
WETH  
MINIMUM_LIQUIDITY  
PERMIT_TYPEHASH  
...
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

## L07 - Missing Events Arithmetic

**Criticality**

minor

**Location**

contract.sol#L521,529,537,553,557,561,738

### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_airDropFee = _newAirDropFee
minimumTokensBeforeSwap = newLimit
coolBlock = _coolBlock
_walletMax = newLimit
_liquidityShare = newLiquidityShare
_totalTaxIfSelling = _sellLiquidityFee.add(_sellrepoFee).add(_sellTeamFee)
_totalTaxIfBuying = _buyLiquidityFee.add(_buyrepoFee).add(_buyTeamFee)
```

### Recommendation

Emit an event for critical parameter changes.

## L09 - Dead Code Elimination

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L95,86,89,92,113,75,81

### Description

Functions that are not used in the contract, and make the code's size bigger.

```
sendValue  
isContract  
functionCallWithValue  
functionCall  
_functionCallWithValue
```

### Recommendation

Remove unused functions.

The domain has been created 5 days before the creation of the audit. It will expire in 12 months.

There is no public billing information, the creator is protected by the privacy settings.

## Summary

There are some functions that can be abused by the owner, like manipulating fees and stopping transactions. The contract can be converted into a honeypot and prevent users from selling if the owner abuses the admin functions. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

# About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.

The Cyberscope team
