The domain is bought almost 2 months before the analysis of this audit, and the project is running for more than 40 days.

This is generally a good sign as most altcoins will try to exit and sell/dump as soon as they launched because they can't handle operations or don't want to spend that time on them and its easier to create a new one.

The fact that the community is alive so many days after the release is usually a big plus for the token.
