Contract Review

Contract Name	PieShare
Compiler Version	v0.6.12+commit.27d51765
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/address/0xd8c152d3b94084d7c8ec951e81fbbfc4b6de5b2b
Symbol	PIE
Decimals	18
Total Supply	100,000,000,000
Website	https://pieshare.io/

Audit Updates

Initial Audit	12/08/2021
Corrected	

Contract Analysis

Pass	Description
✓	Contract Owner is not able to mint new tokens
✓	Contract Owner is not able to burn new tokens
✗	Contract Owner is not able to increase fees more than a reasonable percent
✗	Contract Owner is not able to stop or pause transactions
✓	Contract Owner is not able to transfer tokens from specific address
✓	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
✗	Contract Owner is not able to blacklist wallets from selling

UIF - Unlimited Increase Fees

Criticality high

Location <https://bscscan.com/address/0xd8c152d3b94084d7c8ec951e81fbbfc4b6de5b2b#code#L1363,L1379>

Description

The contract owner has the authority to increase fees without limit. The owner may take advantage of it by calling the `setMarketingFee` function with a high percentage value.

```
function setMarketingFee(uint256 _marketingFee) external onlyOwner{  
    marketingFee = _marketingFee;  
    totalFees =  
    BUSDRewardsFee.add(liquidityFee).add(marketingFee).add(buybackFee);  
  
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ST - Stop Transactions

Criticality	high
Location	https://bscscan.com/address/0xd8c152d3b94084d7c8ec951e81fbbfc4b6de5b2b#code#L1351

Description

The contract owner has the authority to stop transactions by setting a very small amount `maxWalletToken`. This can functionality can be mainly used for anti-whale mechanism but the threat of also reducing the variable to extremely small percent is present.

```
require(contractBalanceReceipient + amount <= maxWalletToken,  
        "Exceeds maximum wallet token amount."  
        );
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklisted Contracts

Criticality	high
Location	https://bscscan.com/address/0xd8c152d3b94084d7c8ec951e81fbbfc4b6de5b2b#code#L1392

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `blacklistAddress` function.

```
function blacklistAddress(address account, bool value) external onlyOwner{  
    _isBlacklisted[account] = value;  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Summary

Pie Share Token is an interesting project with a friendly and growing community. Pie Share's main utility will be an advertising platform. They mention NFT rewards to holders as passive income on their website. The contract analysis reported 3 critical issues. There are some functions that can be abused by the owner, like manipulating fees without limitations, blacklisting addresses and reducing the max amount of tokens a wallet can have without restrictions. A multi-wallet signing pattern or renouncing the ownership will eliminate all the contract threats. Finally, KYC or doxxing the team is advised in order to gain confidence and trust from the community.
