## Audit Updates

<b>Initial Audit</b>	30th March 2022
<b>Corrected</b>	

# Contract Analysis

● Critical   ● Medium   ● Minor   ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

# Contract Diagnostics

● Critical    ● Medium    ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L07	Missing Events Arithmetic
●	L08	Tautology or Contradiction
●	L09	Dead Code Elimination
●	L13	Divide before Multiply Operation
●	L15	Local Scope Variable Shadowing

## L01 - Public Function could be Declared External

**Criticality**

minor

**Location**

contract.sol#L83,91,280,288,305,331,339,350,368,396 and 3 more

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
isExcludedFromFees  
setAutomatedMarketMakerPair  
decreaseAllowance  
increaseAllowance  
transferFrom  
approve  
allowance  
transfer  
decimals  
...
```

### Recommendation

Use the external attribute for functions never called from the contract.

## L02 - State Variables could be Declared Constant

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L1049

### Description

Constant state variables should be declared constant to save gas.

```
manualBurnFrequency
```

### Recommendation

Add the constant attribute to state variables that never change.

## L04 - Conformance to Solidity Naming Conventions

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L875,877,908,958,1093,1098,1237,1238,1239,1249 and 7 more

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
_isExcludedMaxTransactionAmount  
deadAddress  
_Enabled  
_percent  
_frequencyInSeconds  
_devFee  
_liquidityFee  
_marketingFee  
devWalletUpdated  
...
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

## L07 - Missing Events Arithmetic

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L1191,1208,1216,1236,1248,1529

### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
lpBurnFrequency = _frequencyInSeconds  
sellMarketingFee = _marketingFee  
buyMarketingFee = _marketingFee  
maxWallet = newNum * (10 ** 18)  
maxTransactionAmount = newNum * (10 ** 18)  
swapTokensAtAmount = newAmount
```

### Recommendation

Emit an event for critical parameter changes.

## L08 - Tautology or Contradiction

**Criticality**

minor

**Location**

contract.sol#L1529

### Description

Detects expressions that are tautologies or contradictions. For instance, an uint variable will always be greater than or equal to zero.

```
require(bool,string)(_percent <= 1000 && _percent >= 0, Must set auto LP burn  
percent between 0% and 10%)
```

### Recommendation

Fix the incorrect comparison by changing the value type or the comparison.

## L09 - Dead Code Elimination

**Criticality**

minor

**Location**

contract.sol#L493

### Description

Functions that are not used in the contract, and make the code's size bigger.

`_burn`

### Recommendation

Remove unused functions.

## L13 - Divide before Multiply Operation

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L1302

### Description

Performing divisions before multiplications may cause lose of prediction.

```
fees = amount.mul(buyTotalFees).div(100)
tokensForMarketing += (fees * sellMarketingFee) / sellTotalFees
tokensForDev += (fees * sellDevFee) / sellTotalFees
fees = amount.mul(sellTotalFees).div(100)
```

### Recommendation

The multiplications should be prior to the divisions.

## L15 - Local Scope Variable Shadowing

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L1134

### Description

There are variables that are defined in the local scope containing the same name from an upper scope.

```
totalSupply
```

### Recommendation

The local variables should have different names from the upper scoped variables.

## Summary

Crypto Wrestling Inu is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a limit of max 25% fees.

## About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
