Audit Updates

| | |
|----------------------|----------------|
| Initial Audit | 4th April 2022 |
| Corrected | |

Contract Analysis

● Critical ● Medium ● Minor ● Pass

| Severity | Code | Description |
|----------|------|---|
| ● | ST | Contract Owner is not able to stop or pause transactions |
| ● | OCTD | Contract Owner is not able to transfer tokens from specific address |
| ● | OTUT | Owner Transfer User's Tokens |
| ● | ELFM | Contract Owner is not able to increase fees more than a reasonable percent (25%) |
| ● | ULTW | Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent |
| ● | MT | Contract Owner is not able to mint new tokens |
| ● | BT | Contract Owner is not able to burn tokens from specific wallet |
| ● | BC | Contract Owner is not able to blacklist wallets from selling |

BC - Blacklisted Contracts

| | |
|-------------|-------------------|
| Criticality | medium |
| Location | contract.sol#L944 |

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `setBotBlacklist` function.

```
require(!blacklist[sender] && !blacklist[recipient], "in_blacklist");
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor

| Severity | Code | Description |
|----------|------|--|
| ● | MTS | Manipulate Total Supply |
| ● | CO | Code Optimization |
| ● | L01 | Public Function could be Declared External |
| ● | L02 | State Variables could be Declared Constant |
| ● | L04 | Conformance to Solidity Naming Conventions |
| ● | L05 | Unused State Variable |
| ● | L07 | Missing Events Arithmetic |
| ● | L09 | Dead Code Elimination |
| ● | L13 | Divide before Multiply Operation |

MTS - Manipulate Total Supply

| | |
|--------------------|-------------------|
| Criticality | minor |
| Location | contract.sol#L890 |

Description

The total supply increased proportional to the time that has elapsed since the contract creation. This change will have a direct impact on the token price and Market Cap. This is a common feature in smart contracts called “rebase”.

```
for (uint256 i = 0; i < times; i++) {  
    _totalSupply = _totalSupply  
        .mul((10**RATE_DECIMALS).add(rebaseRate))  
        .div(10**RATE_DECIMALS);  
}
```

CO - Code Optimization

| | |
|--------------------|-------------------|
| Criticality | minor |
| Location | contract.sol#L507 |

Description

There are code segments that could be optimized. A segment may be optimized so that it becomes a smaller size, consumes less memory, executes more rapidly, or performs fewer operations.

```
if (deltaTimeFromInit <= (100 days)) {  
    rebaseRate = 828  
;  
} else if (deltaTimeFromInit <= (100 days)) {  
    rebaseRate = 609;  
} else if (deltaTimeFromInit <= (200 days)) {  
    rebaseRate = 392;  
} else {  
    rebaseRate = 45;  
}
```

Recommendation

The second “if” statement will never be reached hence can be removed. If the contract wants to take account more cases then the logic should be rewritten.

L01 - Public Function could be Declared External

| | |
|--------------------|--|
| Criticality | minor |
| Location | contract.sol#L702,715,720,746,750,754,1279 |

Description

Public functions that are never called by the contract should be declared external to save gas.

```
getLiquidityBacking  
decimals  
symbol  
name  
transferOwnership  
renounceOwnership  
owner
```

Recommendation

Use the external attribute for functions never called from the contract

L02 - State Variables could be Declared Constant

| | |
|--------------------|---|
| Criticality | minor |
| Location | contract.sol#L509,788,789,783,786,779,781,782,799,780 |

Description

Constant state variables should be declared constant to save gas.

```
treasuryFee  
swapEnabled  
sellFee  
safuDividendFee  
liquidityFee  
feeDenominator  
autofirePitFee  
ZERO  
DEAD  
...
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality

minor

Location

contract.sol#L158,160,191,237,534,535,484,492,1152,1161 and 19 more

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_totalSupply  
_lastAddLiquidityTime  
_lastRebasedTime  
_initRebaseStartTime  
_autoAddLiquidity  
_autoRebase  
ZERO  
DEAD  
_isFeeExempt  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L05 - Unused State Variable

Criticality

minor

Location

contract.sol#L7

Description

There are segments that contain unused state variables.

```
MAX_INT256
```

Recommendation

Remove unused state variables.

L07 - Missing Events Arithmetic

Criticality

minor

Location

contract.sol#L533

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
minPeriod = _minPeriod
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality

minor

Location

contract.sol#L35

Description

Functions that are not used in the contract, and make the code's size bigger.

```
abs
```

Recommendation

Remove unused functions.

L13 - Divide before Multiply Operation

Criticality

minor

Location

contract.sol#L871,989,1279

Description

Performing divisions before multiplications may cause lose of prediction.

```
liquidityBalance = _gonBalances[pair].div(_gonsPerFragment)
_gonBalances[autoLiquidityReceiver] =
_gonBalances[autoLiquidityReceiver].add(gonAmount.div(feeDenominator).mul(liquidityFee))
_gonBalances[address(this)] =
_gonBalances[address(this)].add(gonAmount.div(feeDenominator).mul(_treasuryFee.add(safuDividendFee)))
_gonBalances[autofirePit] =
_gonBalances[autofirePit].add(gonAmount.div(feeDenominator).mul(autofirePitFee))
feeAmount = gonAmount.div(feeDenominator).mul(_totalFee)
times = deltaTime.div(300)
```

Recommendation

The multiplications should be prior to the divisions.

Contract Functions

Summary

The Smart Contract analysis reported one medium risk level issue. The contract owner can blacklist contracts. Apart from this the contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. The contract raises the total supply and the corresponding holdings proportionally to the time that has elapsed. The taxes are fixed to 15% for buys and 17% to sales and can't be changed. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.

The Cyberscope team
