<b>Corrected</b>	

# Contract Analysis

● Critical
 ● Medium
 ● Minor
 ● Pass

Severity	Code	Description
<span style="color: gold;">●</span>	ST	Contract Owner is not able to stop or pause transactions
<span style="color: blue;">●</span>	OCTD	Contract Owner is not able to transfer tokens from specific address
<span style="color: blue;">●</span>	OTUT	Owner Transfer User's Tokens
<span style="color: blue;">●</span>	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
<span style="color: blue;">●</span>	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
<span style="color: gold;">●</span>	MT	Contract Owner is not able to mint new tokens
<span style="color: blue;">●</span>	BT	Contract Owner is not able to burn tokens from specific wallet
<span style="color: red;">●</span>	BC	Contract Owner is not able to blacklist wallets from selling

## ST - Stop Transactions

Criticality	medium
Location	contract.sol#L1091

### Description

The contract owner has the authority to stop transactions after their first transaction. For instance, if a user buys then he may not be able to sell again. The owner may take advantage of it by setting the `timeDelay` to a high number.

```
if (delayBetweenTransfer[sendAddress] > 0) {  
    require(  
        delayBetweenTransfer[sendAddress] <= block.timestamp,  
        "You must wait a bit to make another transaction"  
    );  
}  
delayBetweenTransfer[sendAddress] =  
    block.timestamp +  
    timeDelay *  
    1 seconds;
```

### Recommendation

The contract could embody a check for not allowing setting the `timeDelay` more than a reasonable amount.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

## MT - Mint Tokens

Criticality	medium
Location	contract.sol#L1026

### Description

The contract owner has the authority to mint tokens. The owner may take advantage of it by calling the `mint` function once every day. The function contains a mint limitation to 2% of the total supply. Even that limitation, 2% of the total supply is enough to highly inflated the token's balance.

```
function mint(address to, uint256 amount) public onlyRole(MINTER_ROLE) {
    uint256 maxDaily = totalSupply() / 20;
    require(
        maxDaily > amount,
        "You can't mint that amount of tokens"
    );
    uint256 _now = block.timestamp;
    require(
        _now > lastMintDate + 24 hours,
        "Can't generate more tokens today, try again tomorrow"
    );
    lastMintDate = _now;
    _mint(to, amount);
}
```

### Recommendation

The owner should carefully manage the credentials of the owner's account. We advised considering an extra-strong security mechanism that the actions may be quarantined by many users instead of one. The owner could also renounce the contract ownership for a period of time or pass the access to the zero address.

## BC - Blacklisted Contracts

<b>Criticality</b>	critical
<b>Location</b>	contract.sol#L1110

### Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `addToBlackList` function.

```
function addToBlackList(address[] calldata addresses)
    external
    onlyRole(BLACKLIST_ROLE)
{
    for (uint256 i; i < addresses.length; ++i) {
        isBlacklisted[addresses[i]] = true;
    }
}
```

### Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

# Contract Diagnostics

● Critical    ● Medium    ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L09	Dead Code Elimination
●	L14	Uninitialized Variables in Local Scope

## L01 - Public Function could be Declared External

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L373,386,404,645,653,684 and 6 more

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
changeTimeDelay  
mint  
burnFrom  
...
```

### Recommendation

Use the external attribute for functions never called from the contract

## L02 - State Variables could be Declared Constant

**Criticality**

minor

**Location**

contract.sol#L1008,1007,1006

### Description

Constant state variables should be declared constant to save gas.

```
walletPresale  
walletLiquidity  
walletIDO
```

### Recommendation

Add the constant attribute to state variables that never change.

## L09 - Dead Code Elimination

**Criticality**

minor

**Location**

contract.sol#L437,428,238,96,71

### Description

Functions that are not used in the contract, and make the code's size bigger.

```
toString  
toHexString  
_msgData  
...
```

### Recommendation

Remove unused functions.

## L14 - Uninitialized Variables in Local Scope

**Criticality**

minor

**Location**

contract.sol#L1114

### Description

There are variables that are defined in the local scope and are not initialized.

```
i
```

### Recommendation

All the local scoped variables should be initialized.

## Summary

The Smart Contract analysis reported some issues. There are some functions that can be abused by the owner, like minting tokens and massively blacklisting contracts. The contract could operate as a honeypot if the configuration is abused by the contract owner. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

## About Coinscope

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Coinscope is aiming to make crypto discoverable and efficient globally. It provides all the essential tools to assist users draw their own conclusions.
