Contract Review

Contract Name	ONE1SHIBA
Compiler Version	v0.6.12+commit.27d51765
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/token/0xcc21ec2C6867AC6EFD9cE158996fF47AB5743B2d
Symbol	1SHIBA
Decimals	9
Total Supply	1,000,000,000,000,000
Website	http://www.1oneshiba.com

Audit Updates

Initial Audit	17th of December 2021
Corrected	

Contract Analysis

The dev wallet takes half of the contract liquidity. That means that every time that the swap and liquify is triggered, the price will have a huge dip.

Pass	Description
✓	Contract Owner is not able to mint new tokens
✓	Contract Owner is not able to burn tokens from specific wallet
✗	Contract Owner is not able to increase fees more than a reasonable percent (10%)
✗	Contract Owner is not able to stop or pause transactions
✓	Contract Owner is not able to transfer tokens from specific address
✗	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
✓	Contract Owner is not able to blacklist wallets from selling

ELFM - Exceed Limit Fees Manipulation

Criticality

high

Location<https://bscscan.com/address/0xcc21ec2c6867ac6efd9ce158996ff47ab5743b2d#code#L887,L821>

Description

The contract owner has the authority to increase fees without limit. The owner may take advantage of it by calling the `setTaxFeePercent` function with a high percentage value.

```
function setTaxFeePercent(uint256 taxFee) external onlyOwner() {  
    _taxFee = taxFee;  
}
```

Recommendation

The contract could decrease the value of `MAX_FEE_RATE` to a value less than 10.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

LTW - Liquidity to Team Wallet

Criticality	high
Location	https://bscscan.com/address/0xcc21ec2c6867ac6efd9ce158996ff47ab5743b2d#code#L1048

Description

The contract transfers a lot of funds to the team wallet. These funds have been swapped from the swap & liquify feature.

```
// 1/2 balance is sent to the marketing wallet, 1/2 is added to the liquidity pool
uint256 marketingTokenBalance = contractTokenBalance.div(2);
uint256 liquidityTokenBalance = contractTokenBalance.sub(marketingTokenBalance);
```

Recommendation

The contract could embody a small percentage and send a small amount of funds to the team wallet, the maximum recommended value is usually 4%.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ST - Stop Transactions

Criticality	high
Location	https://bscscan.com/address/0xcc21ec2c6867ac6efd9ce158996ff47ab5743b2d#code#L1008

Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the `_maxTxAmount` to zero.

```
if(from != owner() && to != owner())  
    require(amount <= _maxTxAmount, "Transfer amount exceeds the maxTxAmount.");
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

Pass	Name
✓	Integer Underflow
✓	Parity Multisig Bug
✓	Callstack Depth Attack
✓	Transaction-Ordering Dependency
✓	Timestamp Dependency
✓	Re-Entrancy

Summary

1shibalnu is aiming to create a meme coin with NFT, land, gameFi, metaverse ecology construction. There are some functions that can be abused by the owner, like manipulating fees and potential to stop the transactions. The **contract contains a critical issue regarding the liquidity moved to the dev wallet**. This functionality cannot be configured with a percentage and it is always the half of the contract liquidity. Every time this mechanism is triggered, it will create a **huge dip in the token's price**. The only way to prevent this issue is to disable the liquify functionality and renounce the ownership of the contract.
