Contract Review

Contract Name	WEB3
Compiler Version	v0.8.11+commit.d7f03943
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/token/0xed93d534fa9d14218b001fc48127720bcae66f16
Symbol	WEB3
Decimals	18
Total Supply	300,000,000
Source	contract.sol
Domain	web3land.net

Audit Updates

Initial Audit	1st February 2022
Corrected	

Contract Analysis

● Critical
 ● Medium
 ● Minor
 ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ELFM - Exceed Limit Fees Manipulation

Criticality	medium
Location	contract.sol#L751

Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the `setExtraSellFee` function with a high percentage value.

Then in the case when the user has to sell, he can have total fees of 25% + `extraSellFee` of 25% = 50% total fees.

```
if(takeFee) {  
    require(tradingOpen,"WEB3: Trading is not open yet");  
    uint256 fees = amount * totalFees / 100;  
    if(automatedMarketMakerPairs[to]){  
        fees += amount * extraSellFee / 100;  
    }  
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L05	Unused State Variable
●	L04	Conformance to Solidity Naming Conventions
●	L09	Dead Code Elimination
●	L07	Missing Events Arithmetic

L01 - Public Function could be Declared External

Criticality

minor

Location

contract.sol#L1558,L1514,L1242 and 22 more

Description

Public functions that are never called by the contract should be declared external to save gas.

```
process
getAccountAtIndex
dividendTokenBalanceOf
...
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contract.sol#L1066,L1064

Description

Constant state variables should be declared constant to save gas.

```
swapTokensAtAmount  
deadWallet
```

Recommendation

Add the constant attribute to state variables that never change.

L05 - Unused State Variable

Criticality

minor

Location

contract.sol#L415

Description

There are segments that contains unused state variable.

```
MAX_INT256
```

Recommendation

Remove unused state variables.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L1475,L1074,L925 and 8 more

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
_account  
_developmentWalletAddress  
magnitude  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L443,L420,L432 and 4 more

Description

Functions that are not used in the contract, and make the code's size bigger.

```
sub  
mul  
div  
...
```

Recommendation

Remove unused functions.

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L1201,L1179,L1173 and 2 more

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
maxWalletTokens = 30000000 * 10 ** 18 * maxWalletPercent
extraSellFee = value
developmentFee = value
...
```

Recommendation

Emit an event for critical parameter changes.

Summary

Web3land aims to be a fully decentralised, fully customizable, virtual reality, community driven, play to earn gaming ecosystem. The smart contract analysis reported no compiler errors and 1 medium severity issue. The project owner can change fees but there are limitations of how much he can increase them (25% for buying, up to 50% for selling). A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Coinscope

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Coinscope is aiming to make crypto discoverable and efficient globally. It provides all the essential tools to assist users draw their own conclusions.
