Contract Review

Contract Name	MainToken
Compiler Version	v0.4.24+commit.e67f0147
Optimization	200 runs
Licence	GNU GPLv3
Explorer	https://etherscan.io/token/0xd35c06a2781f648c75290976ecF71E71582188B7
Symbol	QUA
Decimals	18
Total Supply	1,000,000,000

Audit Updates

Initial Audit	19th of February 2022
Corrected	

Contract Analysis

● Critical
 ● Medium
 ● Minor
 ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

Freeze Functionality

The contract supports a feature called “Freeze”. Users can send an amount of tokens to an address and choose when these tokens will be available. Essentially, the recipient will have the tokens but will not be able to use them until the time period elapses.

According to the contract’s configuration, the *canMint* modifier locks during the contract initialization. That means that the *mintAndFreeze* function is redundant since it can never be called.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L04	Conformance to Solidity Naming Conventions
●	L09	Dead Code Elimination

L01 - Public Function could be Declared External

Criticality

minor

Location

contract.sol#L117,153,159,248,271,327,434,438,446,477 and 6 more

Description

Public functions that are never called by the contract should be declared external to save gas.

```
decimals
symbol
name
unpause
burn
releaseAll
freezeTo
freezingCount
freezingBalanceOf
...
```

Recommendation

Use the external attribute for functions never called from the contract

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L126,141,187,188,189,215,228,229,249,250 and 27 more

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_value  
_to  
_from  
_until  
_amount  
_index  
_addr  
_owner  
_newOwner  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L09 - Dead Code Elimination

Criticality

minor

Location

contract.sol#L76,60

Description

Functions that are not used in the contract, and make the code's size bigger.

```
mul  
div
```

Recommendation

Remove unused functions.

The domain has been created 12 months before the creation of the audit. It will expire in about 1 year.

There is no public billing information, the creator is protected by the privacy settings.

Summary

The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. Additionally, the contract contains some extra features like transfer and time-lock tokens. These functions can be called by the users. The audit describes these features and notes some minor recommendations.
