Audit Updates

Initial Audit	22nd April 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ELFM - Exceed Limit Fees Manipulation

Criticality	minor
Location	contract.sol#L570

Description

The contract owner has the authority to increase over the allowed limit of 25% during the first day of trading. The owner may take advantage of it by setting the total fees to 25%. Then, the sales of the first day will be increased to $25\% * 1.8 = 45\%$.

```
function getMultipliedFee() public view returns (uint256) {
    if (launchedAtTimestamp + 1 days > block.timestamp) {
        return totalFee.mul(18000).div(feeDenominator);
    } else if (buybackMultiplierTriggeredAt.add(buybackMultiplierLength) >
block.timestamp) {
        uint256 remainingTime =
buybackMultiplierTriggeredAt.add(buybackMultiplierLength).sub(block.timestamp);
        uint256 feeIncrease =
totalFee.mul(buybackMultiplierNumerator).div(buybackMultiplierDenominator).sub(t
otalFee);
        return
totalFee.add(feeIncrease.mul(remainingTime).div(buybackMultiplierLength));
    }
    return totalFee;
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L05	Unused State Variable
●	L07	Missing Events Arithmetic
●	L09	Dead Code Elimination
●	L11	Unnecessary Boolean equality

L01 - Public Function could be Declared External

Criticality

minor

Location

contract.sol#L135,142,163,701

Description

Public functions that are never called by the contract should be declared external to save gas.

```
launch  
transferOwnership  
unauthorize  
authorize
```

Recommendation

Use the external attribute for functions never called from the contract.

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contract.sol#L243,256,401,403,405,404,411

Description

Constant state variables should be declared constant to save gas.

```
_totalSupply  
ZERO  
DEAD_NON_CHECKSUM  
DEAD  
BUSD  
dividendsPerShareAccuracyFactor  
WBNB
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L178,281,234,242,243,681,730,740,745,750,755,401,402,403,404,405,407,408,409,411,412,414,415

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_allowances  
_balances  
_maxTxAmount  
_totalSupply  
_decimals  
_symbol  
_name  
DEAD_NON_CHECKSUM  
ZERO  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L05 - Unused State Variable

Criticality

minor

Location

contract.sol#L401,405

Description

There are segments that contain unused state variables.

```
DEAD_NON_CHECKSUM  
BUSD
```

Recommendation

Remove unused state variables.

L07 - Missing Events Arithmetic

Criticality

minor

Location

contract.sol#L281,681,690,707,730,745,750

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
targetLiquidity = _target
swapThreshold = _amount
liquidityFee = _liquidityFee
_maxTxAmount = amount
buybackMultiplierNumerator = numerator
autoBuybackCap = _cap
minPeriod = _minPeriod
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality

minor

Location

contract.sol#L697

Description

Functions that are not used in the contract, and make the code's size bigger.

`launched`

Recommendation

Remove unused functions.

L11 - Unnecessary Boolean equality

Criticality

minor

Location

contract.sol#L496

Description

The comparison to boolean constants is redundant. Boolean constants can be used directly and do not need to be compared to true or false.

```
require(bool,string)(buyBacker[msg.sender] == true,)
```

Recommendation

Remove the equality to the boolean constant.

Summary

EverIncome is an interesting project that has a friendly and growing community. The contract owner has the authority to increase the sale fees to 45% over the first day of trading. Other than that, the contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
