Contract Review

Contract Name	junkolnu
Compiler Version	v0.8.3+commit.8d00100c
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/token/0x8983a6f5b70315f9373d39e14de5afeabf835588
Symbol	Junkolnu
Decimals	18
Total Supply	1,000,000,000,000,000
Website	https://junkoinu.org/

Audit Updates

Initial Audit	9th of December 2021
Corrected	

Contract Analysis

Pass	Description
✓	Contract Owner is not able to mint new tokens
✗	Contract Owner is not able to burn new tokens
✗	Contract Owner is not able to increase fees more than a reasonable percent (up to 10%)
✗	Contract Owner is not able to stop or pause transactions
✓	Contract Owner is not able to transfer tokens from specific address
✓	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
✓	Contract Owner is not able to blacklist wallets from selling

BT - Burn Tokens

Criticality high

Location <https://bscscan.com/address/0x8983a6f5b70315f9373d39e14de5afeabf835588#code#L841>

Description

The contract owner has the authority to burn tokens from the contract's total supply. The owner may take advantage of it by calling the `burn` function.

```
function _burn(address account, uint256 amount) public virtual onlyOwner{
    require(account != address(0), "ERC20: burn from the zero address");
    _tTotal -= amount;
}
```

Recommendation

The owner should carefully manage the credentials of the owner's account. We advised considering an extra-strong security mechanism that the actions may be quarantined by many users instead of one. The owner could also renounce the contract ownership for a period of time or pass the access to the zero address.

UIF - Unlimited Increase Fees

Criticality

high

Location<https://bscscan.com/address/0x8983a6f5b70315f9373d39e14de5afeabf835588#code#L1001,L1005,L1009>

Description

The contract owner has the authority to increase fees without limit. The owner may take advantage of it by calling the `setTaxFeePercent` function with a high percentage value.

```
function setTaxFeePercent(uint256 taxFee) external onlyOwner() {  
    _taxFee = taxFee;  
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ST - Stop Transactions

Criticality high

Location <https://bscscan.com/address/0x8983a6f5b70315f9373d39e14de5afeabf835588#code#L1145>

Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the `_maxTxAmount` to zero.

```
if(from != owner() && to != owner())  
    require(amount <= _maxTxAmount, "Transfer amount exceeds the maxTxAmount.");
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

Pass	Name
✓	Integer Underflow
✓	Parity Multisig Bug
✓	Callstack Depth Attack
✓	Transaction-Ordering Dependency
✓	Timestamp Dependency
✓	Re-Entrancy

Summary

JunkoInu is a meme token project with a friendly and growing community. The contract analysis reported 3 critical issues. There are some functions that can be abused by the owner, like manipulating fees without limitations, indirectly stopping transactions and arbitrarily burning the contract's circulating tokens. A multi-wallet signing pattern or renouncing the ownership will eliminate all the contract threats. Finally, KYC or doxxing the team is advised in order to gain confidence and trust from the community.
