Contract Review

Contract Name	TickALock
Compiler Version	v0.8.11+commit.d7f03943
Optimization	200 runs
Licence	MIT
Explorer	https://bscscan.com/token/0xA94F8D276638431FC85a1ef7059A20F1Cd7D66ae
Symbol	TIALO
Decimals	9
Total Supply	23,956,766,528
Source	contract.sol
Domain	

Audit Updates

Initial Audit	5th February 2022
Corrected	

Contract Analysis

● Critical
 ● Medium
 ● Minor
 ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L07	Missing Events Arithmetic

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L821,L746,L741 and 11 more

Description

Public functions that are never called by the contract should be declared external to save gas.

```
allowance
updateMarketingWallet
disableAntiSnipe
...
```

Recommendation

Use the external attribute for functions never called from the contract

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contract.sol#L262,L260,L271

Description

Constant state variables should be declared constant to save gas.

```
_totalSupply24  
_totalSupply2  
_maxSellDelay
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality

minor

Location

contract.sol#L907,L903,L902 and 40 more

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_alphabet  
_guessCount  
_puzzleWeek  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L548

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_marketingTax = marketingTax
```

Recommendation

Emit an event for critical parameter changes.

Summary

Tick a Lock combines tokenomics with gamification in the same contract. The smart contract analysis reported no compiler errors or major issues. There are some functions that can be called by the owner but there are limitations to what he can change. There is no malicious function that can interrupt the users' transactions.

The smart contract contains a game where users submit solutions for a puzzle. The users have to pay a fee in order to submit the solution. This fee is accumulated to the smart contract. Proportions of the accumulated fee is moved to the marketing, liquidity and crossword pot vaults. The crossword pot is the award that is shared to the winners.

The contract owner is responsible for setting the correct answer and the list of winners. The smart contract does not provide any guarantee that all the correct solutions will be awarded.
