Audit Updates

Initial Audit	13th April 2022
Corrected	

Contract Analysis

● Critical ● Medium ● Minor ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

ST - Stop Transactions

Criticality	medium
Location	contract.sol#L1551

Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the `_maxTxAmount` to zero.

```
if (antiwhaleEnabled && ((from != owner() && to != owner()) ||
!(_isExcludedFromTxLimit[from]))) {
    require(
        amount <= _maxTxAmount,
        'Transfer amount exceeds the maxTxAmount.'
    );
}
```

Recommendation

The contract could embody a check for not allowing setting the `_maxTxAmount` less than a reasonable amount. A suggested implementation could check that the maximum amount should be more than a fixed percentage of the total supply.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

● Critical ● Medium ● Minor

Severity	Code	Description
●	L01	Public Function could be Declared External
●	L02	State Variables could be Declared Constant
●	L04	Conformance to Solidity Naming Conventions
●	L06	Missing Events Access Control
●	L07	Missing Events Arithmetic
●	L09	Dead Code Elimination
●	L13	Divide before Multiply Operation
●	L14	Uninitialized Variables in Local Scope

L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L551,560,566,574,579,587,1046,1050,1054,1058,1062,1075,1079,1089,1098,1107,1116,1134,1147,1163,1167,1171,1188,1219,1269,1276,1280,1284,1317,1484,1489,1513,1529,1696,1704,1711,1714,1751

Description

Public functions that are never called by the contract should be declared external to save gas.

```
setNumTokensell  
isExcludedFromMaxWallet  
setExcludedMaxWallet  
setBuyFees  
setSellFee  
enableAntiwhale  
isExcludedFromFee  
getMarketingAddr  
setTeamWallet  
...
```

Recommendation

Use the external attribute for functions never called from the contract

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contract.sol#L958,956,957,952

Description

Constant state variables should be declared constant to save gas.

```
_tTotal  
_symbol  
_name  
_decimals
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L657,659,690,734,1330,1337,1468,1473,961,963,965,968,971,989,995,996,1001

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow `_` at the beginning of the `mixed_case` match for private variables and unused parameters.

```
_maxTxAmount  
_isExcludedFromMaxWalletLimit  
UniswapV2Pair  
_teamWallet  
_teamFee  
_marketingFee  
_liquidityFee  
antiSniping_failsafe  
_taxFee  
...
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

L06 - Missing Events Access Control

Criticality

minor

Location

contract.sol#L566

Description

Detected missing events for critical access control parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_multiSig = newMultisig
```

Recommendation

Emit an event for critical parameter changes.

L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L1062,1312,1696,1704,1751

Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
numTokensSellToAddToLiquidity = value
teamFeeBuy = team
teamFeeSell = team
_maxTxAmount = _tTotal.mul(maxTxPercent).div(100 * 10 ** 2)
maxWalletAmount = val
```

Recommendation

Emit an event for critical parameter changes.

L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L226,88,101,120,140,196,214,163,178,30,59

Description

Functions that are not used in the contract, and make the code's size bigger.

```
sendValue  
isContract  
functionStaticCall  
functionDelegateCall  
functionCallWithValue  
functionCall  
_verifyCallResult  
...
```

Recommendation

Remove unused functions.

L13 - Divide before Multiply Operation

Criticality	minor
Location	contract.sol#L1613

Description

Performing divisions before multiplications may cause lose of prediction.

```
teamBal =  
contractTokenBalance.mul(_teamFee).div(_marketingFee.add(_liquidityFee).add(_teamFee))  
marketingBalance =  
contractTokenBalance.mul(_marketingFee).div(_marketingFee.add(_liquidityFee).add(_teamFee))
```

Recommendation

The multiplications should be prior to the divisions.

L14 - Uninitialized Variables in Local Scope

Criticality

minor

Location

contract.sol#L1358,1357

Description

There are variables that are defined in the local scope and are not initialized.

```
my_tVector  
my_rVector
```

Recommendation

All the local scoped variables should be initialized.

Summary

RISING BIRD is an interesting project that has a friendly and growing community. The Smart Contract analysis reported one issue. The contract owner can stop the transactions. Other than that, the contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a limit of max 25% fees.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.

The Cyberscope team
