## Audit Updates

<b>Initial Audit</b>	28th April 2022
<b>Corrected</b>	

# Contract Analysis

● Critical    ● Medium    ● Minor    ● Pass

Severity	Code	Description
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	OTUT	Owner Transfer User's Tokens
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	BC	Contract Owner is not able to blacklist wallets from selling

# Contract Diagnostics

● Critical    ● Medium    ● Minor

Severity	Code	Description
●	BLC	Business Logic Concern
●	FSA	Fixed Swap Address
●	L01	Public Function could be Declared External
●	L04	Conformance to Solidity Naming Conventions
●	L09	Dead Code Elimination
●	L11	Unnecessary Boolean equality
●	L15	Local Scope Variable Shadowing

## BLC - Business Logic Concern

<b>Criticality</b>	critical
<b>Location</b>	contract.sol#L1165,1178

### Description

The contract is transferring the liquidity fee to the pair. This is not working as a liquidity fee since it is not adding the pair tokens.

```
super._transfer(sender, uniswapV2Pair, _LiquidityFee);
```

The contract takes a liquidity fee from the sale transactions but it does not transfer it to any recipient. As a result the total supply diverges from the balances.

```
if(sender == uniswapV2Pair && // Swap BNB to Tokens (BUY)
    recipient != owner() &&
    !excludeFee[recipient]){

    if(taxStatus == true) {
        uint256 _MarketingFee = amount.mul(marketingBuyFee).div(100);
        uint256 _LiquidityFee = amount.mul(liquidityBuyFee).div(100);
        uint256 _BurnFee = amount.mul(burnBuyFee).div(100);

        super._transfer(sender, marketingAddress, _MarketingFee);
        super._burn(sender, _BurnFee);

        amount = amount.sub(_MarketingFee.add(_BurnFee).add(_LiquidityFee));
    }
}
super._transfer(sender, recipient, amount);
```

### Recommendation

The team is advised to carefully check if the implementation follows the expected business logic.

## FSA - Fixed Swap Address

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L1136

### Description

The swap address is assigned once in the constructor and it can not be changed. The decentralized swaps sometimes create a new swap version or abandon the current. A contract that cannot change the swap address may not be able to catch-up the upgrade.

```
uniswapV2Router = IUniswapV2Router02(routerAddress);
    uniswapV2Pair =
    IUniswapV2Factory(uniswapV2Router.factory()).createPair(address(this),
    uniswapV2Router.WETH());
    _approve(address(this), address(uniswapV2Router), ~uint256(0));
```

### Recommendation

It could be better to allow the swap address mutation in case of future swap updates.

## L01 - Public Function could be Declared External

**Criticality**

minor

**Location**

contract.sol#L788,796

### Description

Public functions that are never called by the contract should be declared external to save gas.

```
transferOwnership  
renounceOwnership
```

### Recommendation

Use the external attribute for functions never called from the contract

## L04 - Conformance to Solidity Naming Conventions

**Criticality**

minor

**Location**

contract.sol#L38,1120,1123,1124,1125,1126,1127,1128,1129,1130

### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
routerAddress
marketingAddress
burnBuyFee
burnSellFee
liquidityBuyFee
liquiditySellFee
marketingBuyFee
marketingSellFee
maxSupply
...
```

### Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

## L09 - Dead Code Elimination

**Criticality**

minor

**Location**

contract.sol#L352,362,381,395,441,451,414,424,303,327 and 2 more

### Description

Functions that are not used in the contract, and make the code's size bigger.

```
_burnFrom  
verifyCallResult  
sendValue  
isContract  
functionStaticCall  
functionDelegateCall  
functionCallWithValue  
functionCall  
...
```

### Recommendation

Remove unused functions.

## L11 - Unnecessary Boolean equality

<b>Criticality</b>	minor
<b>Location</b>	contract.sol#L1149

### Description

The comparison to boolean constants is redundant. Boolean constants can be used directly and do not need to be compared to true or false.

```
taxStatus == true
```

### Recommendation

Remove the equality to the boolean constant.

## L15 - Local Scope Variable Shadowing

**Criticality**

minor

**Location**

contract.sol#L860,1135

### Description

There are variables that are defined in the local scope containing the same name from an upper scope.

```
_symbol  
_name  
symbol  
name
```

### Recommendation

The local variables should have different names from the upper scoped variables.

## Summary

LuffyInu is an interesting project that has a friendly and growing community. The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. The fees are fixed to 3%.

## About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
