Domain	captaingeorge.io

Audit Updates

Initial Audit	20th December 2021
Corrected	

Contract Analysis

● Critical
 ● Medium
 ● Pass

Severity	Code	Description
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (10%)
●	ST	Contract Owner is not able to stop or pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	BC	Contract Owner is not able to blacklist wallets from selling

ELFM - Exceed Limit Fees Manipulation

Criticality

critical

Location<https://bscscan.com/address/0x0f575AEfac7c1033662F43EdB4297CF2Cab30C4f#code#L499>

Description

The contract owner has the authority to increase over the allowed limit of 10%. The owner may take advantage of it by calling the `setTaxFeePercent` function with one high value and two low.

```
function setRatios(uint16 rewards, uint16 charity, uint16 marketing) external  
onlyOwner {  
    _ratios.rewards = rewards;  
    _ratios.charity = charity;  
    _ratios.marketing = marketing;  
    _ratios.total = rewards + charity + marketing;  
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ULTW - Unlimited Liquidity to Team Wallet

Criticality

critical

Location<https://bscscan.com/address/0x0f575AEfac7c1033662F43EdB4297CF2Cab30C4f#code#L773>

Description

The contract owner has the authority to transfer funds without limit to the team wallet. These funds have been swiped from the swap & liquify feature. The owner may take advantage of it by setting a high fee to the `_ratios.charity` variable.

```
uint256 amountBNB = address(this).balance;
uint256 amountBNBReflection = (amountBNB * _ratios.rewards) / _ratios.total;

try reflector.load{value: amountBNBReflection}() {} catch {}

if(address(this).balance > 0){
    _taxWallets.charity.transfer((amountBNB * _ratios.charity) / _ratios.total);
    _taxWallets.marketing.transfer(address(this).balance);
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklisted Contracts

Criticality	critical
Location	https://bscscan.com/address/0x0f575AEfac7c1033662F43EdB4297CF2Cab30C4f#code#L661

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by adding addresses to the `antiSnipe` class.

```
bool checked;  
try antiSnipe.checkUser(from, to, amount) returns (bool check) {  
    checked = check;  
} catch {  
    revert();  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Summary

Captain George Token is aiming to deliver a 3D NFT Ship Battle Game. Additionally, it is categorized as a charity token that will help serve the oceans by education of conservation and cleanup. The token has a friendly and growing community. There are some functions that can be abused by the owner, like manipulating fees, transferring a lot of liquidity to the dev wallet and blacklisting addresses. The smart contract contains 2 external implementations, the AntiSnipe and Cashier. The source code of those classes is not public. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.
