Summary

ShitCoin Token is a funny meme project that is aiming to inspire people and have fun while earning. The token has a friendly and growing community. The contract analysis showed no compiler errors or critical issues, in fact the fees can not be changed and the owner-only functions are limited to protect the holders. The only point worth mentioning is that **the dev team takes big portions of the liquidity to be added to the pool and that will look like a big sell in the chart.** Different fees applied on sell and buy transactions to reward long-term holders, and 1-2% tokens of each transaction are being sent to the stacking address.
