Audit Updates

Initial Audit	26th December 2021
Corrected	

Contract Analysis

● Critical
 ● Medium
 ● Pass

Severity	Code	Description
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ST	Contract Owner is not able to pause transactions
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	BC	Contract Owner is not able to blacklist wallets from selling

MT - Mint Tokens

Criticality

critical

Location<https://bscscan.com/address/0xd61b85636b4a5834c1e8a196da7218cebbf76c36#code#L256>

Description

The contract owner has the authority to mint tokens. The owner may take advantage of it by calling the `mint` function. As a result the contract tokens will be highly inflated.

```
function mint(address account, uint256 amount) onlyOwner public {  
  
    totalSupply = totalSupply.add(amount);  
    balances[account] = balances[account].add(amount);  
    emit Mint(address(0), account, amount);  
    emit Transfer(address(0), account, amount);  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BC - Blacklisted Contracts

Criticality

medium

Location<https://bscscan.com/address/0xd61b85636b4a5834c1e8a196da7218cebbf76c36#code#L220>

Description

The contract owner has the authority to stop contracts from transactions. The owner may take advantage of it by calling the `blacklistAddress` function.

```
function blackListAddress(address listAddress, bool isBlackListed) public  
whenNotPaused onlyOwner returns (bool success) {  
    return super._blackList(listAddress, isBlackListed);  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ST - Stop Transactions

Criticality	medium
Location	https://bscscan.com/address/0xd61b85636b4a5834c1e8a196da7218cebbf76c36#code#L1

Description

The contract owner has the authority to pause transactions. He can do that by calling the `pause` function.

```
function transfer(address _to, uint256 _value) public whenNotPaused returns (bool) {  
    return super.transfer(_to, _value);  
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Summary

PLATFORM token is a decentralised Automated Market Maker (AMM) based on the BSC. The token has a friendly and growing community. There are some functions that can be abused by the owner, like minting new tokens and blacklisting addresses. As an Automated Market Maker, the mint function might be needed but there should be some business logic to protect the users from potential hacks or abuse by the team. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.
