Audit Updates

| | |
|---------------|-----------------|
| Initial Audit | 20th March 2022 |
| Corrected | 29th March 2022 |

Lottery Feature

The contract implements a lottery feature. All the users that buy or sell the token are getting a ticket. Every 7 days and 5 minutes 3 winners are shared the awarded amount. The awarded amount is USDT that has accumulated from the fees.

| First Winner | Second Winner | Third Winner |
|--------------|---------------|--------------|
| 80% | 15% | 5% |

Notes about the lottery feature:

- The lottery duration is 7 days and 5 minutes.
- There are 3 winners that share the awarded amount proportionally to their position.
- The ticker randomization is using the Chainlink VRF mechanism that guarantees a decent distribution <https://docs.chain.link/docs/chainlink-vrf/>
- The winners can claim their rewards until 3 months after their declaration. the Then, the contract owner can transfer the unclaimed prize back to the current jackpot minus a fee of 10%.
- The wallets that hold less than 0,000010 tokens are excluded from the winners even if they won.
- Each address can have up to 15 tickets.
- If the participants of the current round are less than 3, then the lottery process is extended for another 7 days and 5 minutes.

Recommendation:

The winners even if they were chosen, they may not be eligible to win. This will happen if they hold less than 10 tokens. The duplicate winners will also be excluded. The lottery could proceed to the next winner in the queue, like a fourth randomly picked, rather than moving the corresponding funds to the marketing wallet.

Contract Analysis

● Critical ● Medium ● Minor ● Pass

| Severity | Code | Description |
|----------|------|---|
| ● | ST | Contract Owner is not able to stop or pause transactions |
| ● | OCTD | Contract Owner is not able to transfer tokens from specific address |
| ● | OTUT | Owner Transfer User's Tokens |
| ● | ELFM | Contract Owner is not able to increase fees more than a reasonable percent (25%) |
| ● | ULTW | Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent |
| ● | MT | Contract Owner is not able to mint new tokens |
| ● | BT | Contract Owner is not able to burn tokens from specific wallet |
| ● | BC | Contract Owner is not able to blacklist wallets from selling |

Contract Diagnostics

● Critical ● Medium ● Minor

| Severity | Code | Description |
|----------|------|--|
| ● | FSA | Fixed Swap Address |
| ● | MC | Missing Check |
| ● | L01 | Public Function could be Declared External |
| ● | L02 | State Variables could be Declared Constant |
| ● | L04 | Conformance to Solidity Naming Conventions |

FSA - Fixed Swap Address

| | |
|--------------------|-------------------|
| Criticality | minor |
| Location | contract.sol#L179 |

Description

The swap address is assigned once in the constructor and it can not be changed. The decentralized swaps sometimes create a new swap version or abandon the current. A contract that cannot change the swap address may not be able to catch-up the upgrade.

```
uniswapV2Router =  
IUniswapV2Router02(0x7a250d5630B4cF539739dF2C5dAcb4c659F2488D);
```

Recommendation

It could be better to allow the swap address mutation in case of future swap updates.

MC - Missing Check

| | |
|-------------|-------------------|
| Criticality | medium |
| Location | contract.sol#L329 |

Description

The `_transferFromPrizePot` function is an essential part of the lottery feature. The lottery algorithm uses this functionality in order to move the funds to the winners. The `transfer()` function does not guarantee that the amount has been moved. Hence, if the transfer fails, the lottery functionality will not be interrupted and it will assume that the user has received the corresponding amount.

```
function _transferFromPrizePot(uint256 _amountToSend, address to) private {  
    _usdtToken.transfer(to, _amountToSend);  
}
```

Recommendation

The contract could embed a safe transfer technique that will guarantee that the function will revert in case of a failure.

L01 - Public Function could be Declared External

| | |
|--------------------|--|
| Criticality | minor |
| Location | contracts/Figures.sol#L579,583,587,591 |

Description

Public functions that are never called by the contract should be declared external to save gas.

```
totalSupply  
decimals  
symbol  
name
```

Recommendation

Use the external attribute for functions never called from the contract

L02 - State Variables could be Declared Constant

Criticality

minor

Location

contracts/Figures.sol#L30,29,28,33,31,24,27

Description

Constant state variables should be declared constant to save gas.

```
vrfCoordinator  
s_subscriptionId  
requestConfirmations  
numWords  
link  
keyHash  
callbackGasLimit
```

Recommendation

Add the constant attribute to state variables that never change.

L04 - Conformance to Solidity Naming Conventions

Criticality

minor

Location

contracts/Figures.sol#L20,21,24,34

Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow _ at the beginning of the mixed_case match for private variables and unused parameters.

```
s_requestId  
s_subscriptionId  
LINKTOKEN  
COORDINATOR
```

Recommendation

Follow the Solidity naming convention.

<https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions>

| Registrar IANA ID | 1068 |

The domain has been created 3 months before the creation of the audit. It will expire in 9 months.

There is no public billing information, the creator is protected by the privacy settings.

Summary

The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a fixed 7% fee. The contract implements a lottery feature. The audit mentions some security concerns, business logic recommendations and performance improvements.

About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Cyberscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
