Contract Review

Contract Name	JEET
Compiler Version	v0.6.12+commit.27d51765
Optimization	200 runs
Licence	MIT
Explorer	https://testnet.bscscan.com/address/0xc66cc2a321ad9c79ad8db312824869386dc6366c
Symbol	JEET
Decimals	9
Total Supply	1,000,000,000,000,000
Website	

Audit Updates

Initial Audit	28th of December 2021
Corrected	

Contract Analysis

● Critical
 ● Medium
 ● Minor
 ● Pass

Severity	Code	Description
●	MT	Contract Owner is not able to mint new tokens
●	BT	Contract Owner is not able to burn tokens from specific wallet
●	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
●	ST	Contract Owner is not able to pause transactions for everyone else except him
●	OCTD	Contract Owner is not able to transfer tokens from specific address
●	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
●	BC	Contract Owner is not able to blacklist wallets from selling

ST - Stop Transactions

Criticality	medium
Location	https://testnet.bscscan.com/address/0xc66cc2a321ad9c79ad8db312824869386dc6366c#code#L271

Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the `maxTxAmount` to zero.

```
if(from != owner() && to != owner()) {  
    require(amount <= maxTxAmount, "Transfer amount exceeds the  
maxTxAmount.");  
}
```

Recommendation

The contract could embody a check for not allowing setting the `_maxTxAmount` less than a reasonable amount. A suggested implementation could check that the maximum amount should be more than a fixed percentage of the total supply.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ELFM - Exceed Limit Fees Manipulation

Criticality

critical

Location<https://testnet.bscscan.com/address/0xc66cc2a321ad9c79ad8db312824869386dc6366c#code#L136,L142,L148>

Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the `setMarketingFee` function with a high percentage value.

```
function setMarketingFee(uint256 buy, uint256 sell, uint256 p2p) external  
onlyOwner{  
    marketingFee[0] = buy;  
    marketingFee[0] = sell;  
    marketingFee[0] = p2p;  
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ULTW - Unlimited Liquidity to Team Wallet

Criticality

critical

Location<https://testnet.bscscan.com/address/0xc66cc2a321ad9c79ad8db312824869386dc6366c#code#L306>

Description

The contract owner has the authority to transfer funds without limit to the team wallet. These funds have been swapped from the swap & liquify feature. The owner may take advantage of it by setting a high fee to the `marketingFeeTotal` variable.

```
if(marketingPart > 0) {  
    payable(marketingWalletAddress).transfer(marketingPart);  
}
```

```
uint256 marketingTokens =  
contractTokenBalance.mul(marketingFee).div(totalFees);  
swapAndSendToFee(marketingTokens);
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Flow

Summary

JEET token is an interesting project. The smart contract analysis reported no compiler errors but there were 2 critical and 1 medium issues found. There are functions that can be abused by the owner, like manipulating fees up to 100% and transferring funds to the team's wallet. The owner can also change the max transaction amount to a very low value for everyone else except himself. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.

About Coinscope

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analysing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Coinscope is aiming to make crypto discoverable and efficient globally. It provides all the essential tools to assist users draw their own conclusions.
