# **Contract Review**

Contract Name	TEGPAY
Compiler Version	v0.8.4+commit.c7e474f2
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/token/0xc35B753d5F2e86cae7C 42f755eb1812855aB10c0
Symbol	TEG
Decimals	18
Total Supply	99,999,999
Source	contract.sol
Domain	pt.tegpayfinance.org

# **Audit Updates**

Initial Audit	17th February 2022
Corrected	

# **Contract Analysis**

CriticalMediumMinorPass

Severity	Code	Description
•	ST	Contract Owner is not able to stop or pause transactions
•	OCTD	Contract Owner is not able to transfer tokens from specific address
•	OTUT	Owner Transfer User's Tokens
•	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
•	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
•	MT	Contract Owner is not able to mint new tokens
•	ВТ	Contract Owner is not able to burn tokens from specific wallet
•	ВС	Contract Owner is not able to blacklist wallets from selling

#### ST - Stop Transactions

Criticality	medium
Location	contract.sol#L638

#### Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the maxTxAmount to zero.

#### Recommendation

The contract could embody a check for not allowing setting the \_maxTxAmount less than a reasonable amount. A suggested implementation could check that the maximum amount should be more than a fixed percentage of the total supply.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

#### **ELFM - Exceed Limit Fees Manipulation**

Criticality	critical
Location	contract.sol#L526,529,532

#### Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the setDevelopmentFeePercent function with a high percentage value.

```
function setDevelopmentFeePercent(uint256 developmentFee) external
onlyOwner() {
    __developmentFee = developmentFee;
}
```

#### Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

#### Fixed Swap Address

#### Description

The swap address is assigned once in the constructor and it can not be changed. The decentralized swaps sometimes create a new swap version or abandon the current. A contract that cannot change the swap address may not be able to catch-up the upgrade.

#### Recommendation

It could be better to allow the swap address mutation in case of future swap updates.

# **Contract Diagnostics**

CriticalMediumMinor

Severity	Code	Description
•	L01	Public Function could be Declared External
•	L02	State Variables could be Declared Constant
•	L04	Conformance to Solidity Naming Conventions
•	L09	Dead Code Elimination
•	L07	Missing Events Arithmetic

#### L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L167,171,417,420,423,426,433,437,440,444 and 11 more

#### Description

Public functions that are never called by the contract should be declared external to save gas.

isExcludedFromFee
setSwapAndLiquifyEnabled
includeInFee
excludeFromFee
excludeFromReward
reflectionFromToken
deliver
totalFees
isExcludedFromReward
...

#### Recommendation

Use the external attribute for functions never called from the contract.

#### L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L381,374,379,380,376,394

#### Description

Constant state variables should be declared constant to save gas.

```
numTokensSellToAddToLiquidity
_tTotal
_symbol
_name
_developmentWalletAddress
_decimals
```

#### Recommendation

Add the constant attribute to state variables that never change.

# L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L202,203,217,235,537,595,600,605,382,384 and 2 more

#### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
_maxTxAmount
_liquidityFee
_developmentFee
_taxFee
_amount
_enabled
WETH
MINIMUM_LIQUIDITY
PERMIT_TYPEHASH
...
```

#### Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions

#### L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L137,106,109,112,115,129,132,121,124,96 and 10 more

#### Description

Functions that are not used in the contract, and make the code's size bigger.

```
trySub
tryMul
tryMod
tryDiv
tryAdd
mod
div
_msgData
sendValue
....
```

#### Recommendation

Remove unused functions.

### L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L523,526,529,532

#### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_maxTxAmount = _tTotal.mul(maxTxPercent).div(10 ** 3)
_liquidityFee = liquidityFee
_developmentFee = developmentFee
_taxFee = taxFee
```

#### Recommendation

Emit an event for critical parameter changes.

## Summary

TegPay is a regional Brazilian token. The Project has a friendly and growing community. There are some functions that can be abused by the owner, like manipulating fees and stopping transactions. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.
