# **Contract Review**

Contract Name	SpongeBob
Compiler Version	v0.8.4+commit.c7e474f2
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/token/0x42611d4e72173E19f66B 8b915C0f665712a8A0A3
Symbol	SpongeBob
Decimals	9
Total Supply	100,000,000,000,000
Source	contract.sol
Domain	spongebobo.com

# **Audit Updates**

Initial Audit	6th March 2022
Corrected	

# **Contract Analysis**

CriticalMediumMinorPass

Severity	Code	Description
•	ST	Contract Owner is not able to stop or pause transactions
•	OCTD	Contract Owner is not able to transfer tokens from specific address
•	OTUT	Owner Transfer User's Tokens
•	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
•	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
•	MT	Contract Owner is not able to mint new tokens
•	ВТ	Contract Owner is not able to burn tokens from specific wallet
•	ВС	Contract Owner is not able to blacklist wallets from selling

# **ULTW - Unlimited Liquidity to Team Wallet**

```
Criticality minor

Location contract.sol#L375
```

#### Description

The contract owner has the authority to transfer funds to the team wallet. These funds have been accumulated from \_taxFeeOnBuy and \_taxFeeOnSell fees collected from the contract. The owner may take advantage of it by calling the manualswap and manualsend sequentially. The funds are liquified on every sale and transfer transaction.

```
function manualswap() external {
    require(_msgSender() == _developmentAddress || _msgSender() ==
    _marketingAddress || _msgSender() == owner());
    uint256 contractBalance = balanceOf(address(this));
    swapTokensForEth(contractBalance);
}

function manualsend() external {
    require(_msgSender() == _developmentAddress || _msgSender() ==
    _marketingAddress || _msgSender() == owner());
    uint256 contractETHBalance = address(this).balance;
    sendETHToFee(contractETHBalance);
}
```

#### Recommendation

The contract could embody a check for allowing liquefying massively more than a reasonable amount.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

# **Contract Diagnostics**

CriticalMediumMinor

Severity	Code	Description
•	FSA	Fixed Swap Address
•	L01	Public Function could be Declared External
•	L02	State Variables could be Declared Constant
•	L05	Unused State Variable
•	L04	Conformance to Solidity Naming Conventions

#### FSA - Fixed Swap Address

Criticality	minor
Location	contract.sol#L166

#### Description

The swap address is assigned once in the constructor and it can not be changed. The decentralized swaps sometimes create a new swap version or abandon the current. A contract that cannot change the swap address may not be able to catch-up the upgrade.

#### Recommendation

It could be better to allow the swap address mutation in case of future swap updates.

#### L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L110,116,184,188,192,196,204,209,213,218 and 6 more

#### Description

Public functions that are never called by the contract should be declared external to save gas.

```
excludeMultipleAccountsFromFees
toggleSwap
setFee
setNewMarketingAddress
setNewDevAddress
rescueForeignTokens
transferFrom
approve
allowance
...
```

#### Recommendation

Use the external attribute for functions never called from the contract

### L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L93

#### Description

Constant state variables should be declared constant to save gas.

\_previousOwner

#### Recommendation

Add the constant attribute to state variables that never change.

## L05 - Unused State Variable

Criticality	minor
Location	contract.sol#L93,127

#### Description

There are segments that contain unused state variables.

```
_tOwned
_previousOwner
```

#### Recommendation

Remove unused state variables.

# L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L34,299,305,312,300,398,132,145,146,147 and 2 more

#### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
_decimals
_symbol
_name
_tTotal
_swapEnabled
_amount
_to
_tokenAddr
marketingAddressUpdated
...
```

#### Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions

Registry Expiry Date	2023-01-06T12:06:41Z
Registrar WHOIS Server	whois.godaddy.com
Registrar URL	http://www.godaddy.com
Registrar	GoDaddy.com, LLC
Registrar IANA ID	146

The domain has been created about 2 months before the creation of the audit. It will expire in 10 months.

There is no public billing information, the creator is protected by the privacy settings.

# Summary

The Smart Contract analysis reported no compiler error or critical issues. The contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions. There is also a limit of max 18% fees.

# About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
