# **Audit Updates**

Initial Audit	22nd April 2022
Corrected	

# **Contract Analysis**

CriticalMediumMinorPass

Severity	Code	Description
•	ST	Contract Owner is not able to stop or pause transactions
•	OCTD	Contract Owner is not able to transfer tokens from specific address
•	OTUT	Owner Transfer User's Tokens
•	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
•	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
•	MT	Contract Owner is not able to mint new tokens
•	ВТ	Contract Owner is not able to burn tokens from specific wallet
•	ВС	Contract Owner is not able to blacklist wallets from selling

#### **ELFM** - Exceed Limit Fees Manipulation

```
Criticality medium

Location contract.sol#L932
```

#### Description

The contract owner has the authority to increase over the allowed limit of 25%. The owner may take advantage of it by calling the setAllFeePercent function with a high percentage value.

```
function setAllFeePercent(uint8 taxFee, uint8 liquidityFee, uint8 burnFee,
uint8 walletFee, uint8 buybackFee) external onlyOwner() {
    require(taxFee >= 0 && taxFee <=maxTaxFee, "TF err");
    require(liquidityFee >= 0 && liquidityFee <=maxLiqFee, "LF err");
    require(burnFee >= 0 && burnFee <=maxBurnFee, "BF err");
    require(walletFee >= 0 && walletFee <=maxWalletFee, "WF err");
    require(buybackFee >= 0 && buybackFee <=maxBuybackFee, "BBF err");
    _taxFee = taxFee;
    _liquidityFee = liquidityFee;
    _burnFee = burnFee;
    _buybackFee = buybackFee;
    _walletFee = walletFee;
}</pre>
```

#### Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

# **Contract Diagnostics**

CriticalMediumMinor

Severity	Code	Description
•	FSA	Fixed Swap Address
•	L01	Public Function could be Declared External
•	L02	State Variables could be Declared Constant
•	L04	Conformance to Solidity Naming Conventions
•	L07	Missing Events Arithmetic
•	L08	Tautology or Contradiction
•	L09	Dead Code Elimination
•	L13	Divide before Multiply Operation

### FSA - Fixed Swap Address

Criticality	minor
Location	contract.sol#L1

#### Description

The swap address is assigned once in the constructor and it can not be changed. The decentralized swaps sometimes create a new swap version or abandon the current. A contract that cannot change the swap address may not be able to catch-up the upgrade.

```
IUniswapV2Router02 _pcsV2Router = IUniswapV2Router02(router);
   // Create a uniswap pair for this new token
pcsV2Pair = IUniswapV2Factory(_pcsV2Router.factory())
   .createPair(address(this), _pcsV2Router.WETH());

// set the rest of the contract variables
pcsV2Router = _pcsV2Router;
```

#### Recommendation

It could be better to allow the swap address mutation in case of future swap updates.

#### L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L500,509,515,520,528,816,820,824,828,837,842,846,851,857,862,86 7,871,875,884,901,924,928,945,967,1068,1325

#### Description

Public functions that are never called by the contract should be declared external to save gas.

recoverBEP20
isExcludedFromFee
setSwapAndLiquifyEnabled
buyBackUpperLimitAmount
includeInFee
excludeFromFee
excludeFromReward
reflectionFromToken
deliver
...

#### Recommendation

Use the external attribute for functions never called from the contract.

#### L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L703,707,709,705,706,708,710,711,730,722

#### Description

Constant state variables should be declared constant to save gas.

```
router
mintedByMudra
minMxWalletPercentage
minMxTxPercentage
maxWalletFee
maxTaxFee
maxLiqFee
maxBuybackFee
maxBurnFee
...
```

#### Recommendation

Add the constant attribute to state variables that never change.

# L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L560,967,1032,1038,726,732,733,736,739,742,745,748,758,759

#### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
_maxWalletAmount
_maxTxAmount
_buybackFee
_walletFee
_burnFee
_liquidityFee
_taxFee
_symbol
_name
...
```

#### Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions

# L07 - Missing Events Arithmetic

Criticality	minor
Location	contract.sol#L932,949,953,960

#### Description

Detected missing events for critical arithmetic parameters. There are functions that have no event emitted, so it is difficult to track off-chain changes.

```
_maxWalletAmount = _tTotal.mul(maxWalletPercent).div(10 ** 2)
_maxTxAmount = _tTotal.mul(maxTxPercent).div(10 ** 2)
buyBackUpperLimit = buyBackLimit * 10 ** 18
_taxFee = taxFee
```

#### Recommendation

Emit an event for critical parameter changes.

# L08 - Tautology or Contradiction

Criticality	minor
Location	contract.sol#L932

#### Description

Detects expressions that are tautologies or contradictions. For instance, an uint variable will always be greater than or equal to zero.

```
require(bool,string)(burnFee >= 0 && burnFee <= maxBurnFee,BF err)
require(bool,string)(liquidityFee >= 0 && liquidityFee <= maxLiqFee,LF err)
require(bool,string)(buybackFee >= 0 && buybackFee <= maxBuybackFee,BBF err)
require(bool,string)(taxFee >= 0 && taxFee <= maxTaxFee,TF err)
require(bool,string)(walletFee >= 0 && walletFee <= maxWalletFee,WF err)</pre>
```

#### Recommendation

Fix the incorrect comparison by changing the value type or the comparison.

# L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L359,319,329,344,354,266,293,437,410,426,421,395,399

#### Description

Functions that are not used in the contract, and make the code's size bigger.

```
safeTransferFrom
safeTransfer
safeIncreaseAllowance
safeDecreaseAllowance
safeApprove
_callOptionalReturn
sendValue
isContract
functionCallWithValue
...
```

#### Recommendation

Remove unused functions.

# L13 - Divide before Multiply Operation

Criticality	minor
Location	contract.sol#L1143

#### Description

Performing divisions before multiplications may cause lose of prediction.

```
spentAmount = contractTokenBalance.div(totFee).mul(_buybackFee)
spentAmount = contractTokenBalance.div(totFee).mul(_walletFee)
spentAmount = contractTokenBalance.div(totFee).mul(_burnFee)
```

#### Recommendation

The multiplications should be prior to the divisions.

The domain has been created about 23 hours before the creation of the audit. It will expire in 12 months.

There is no public billing information, the creator is protected by the privacy settings.

# Summary

Whitebeard Inu is an interesting project that has a friendly and growing community. The contract owner has the ability to increase the fees up to 50%. Other than that, the contract Owner can access some admin functions that can not be used in a malicious way to disturb the users' transactions.

# About Cyberscope

Coinscope audit and K.Y.C. service has been rebranded to Cyberscope.

Coinscope is the leading early coin listing, voting and auditing authority firm. The audit process is analyzing and monitoring many aspects of the project. That way, it gives the community a good sense of security using an informative report and a generic score.

Cyberscope and Coinscope are aiming to make crypto discoverable and efficient globally. They provides all the essential tools to assist users draw their own conclusions.
