# **Contract Review**

Contract Name	ethMContent
Compiler Version	v0.8.7+commit.e28d00a7
Optimization	1 run
Licence	
Explorer	https://rinkeby.etherscan.io/token/0x3c296e2e9b7cc49 67b4776beef50133db0002313
Symbol	MCONTENT
Decimals	6
Total Supply	23,831.004019
Source	contract.sol
Domain	mcontent.net

# **Audit Updates**

Initial Audit	2nd February 2022
Corrected	

# **Contract Analysis**

CriticalMediumMinorPass

Severity	Code	Description
•	ST	Contract Owner is not able to stop or pause transactions
•	OCTD	Contract Owner is not able to transfer tokens from specific address
•	OTUT	Owner Transfer User's Tokens
•	ELFM	Contract Owner is not able to increase fees more than a reasonable percent (25%)
•	ULTW	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
•	MT	Contract Owner is not able to mint new tokens
•	ВТ	Contract Owner is not able to burn tokens from specific wallet
•	ВС	Contract Owner is not able to blacklist wallets from selling

#### MT - Mint Tokens

Criticality	medium
Location	contract.sol#L1331

#### Description

The contract owner has the authority to mint tokens. The owner may take advantage of it by calling the mint function. As a result the contract tokens will be highly inflated

```
function mint(address recipient, uint256 value)
    external
    override
    onlyAdmin

{
    _mint(recipient, value);
    emit Mint(value, recipient);
}
```

#### Recommendation

The owner should carefully manage the credentials of the owner's account. We advised considering an extra-strong security mechanism that the actions may be quarantined by many users instead of one. The owner could also renounce the contract ownership for a period of time or pass the access to the zero address.

#### Note

The token owner has acknowledged that the minting functionality is required for the contract bridging.

#### BT - Burn Tokens

Criticality	medium
Location	contract.sol#L1341

#### Description

The contract owner has the authority to burn tokens from a specific address. The owner may take advantage of it by calling the burn function. As a result the targeted contract address will lose the corresponding tokens.

```
function burn(address fromAddress, uint256 value) external override onlyAdmin {
    _burn(fromAddress, value);
    emit Burn(value, fromAddress);
}
```

#### Recommendation

The owner should carefully manage the credentials of the owner's account. We advised considering an extra-strong security mechanism that the actions may be quarantined by many users instead of one. The owner could also renounce the contract ownership for a period of time or pass the access to the zero address.

#### Note

The token owner has acknowledged that the burning functionality is required for the contract bridging.

# **Contract Diagnostics**

CriticalMediumMinor

Severity	Code	Description
•	L01	Public Function could be Declared External
•	L02	State Variables could be Declared Constant
•	L04	Conformance to Solidity Naming Conventions
•	L09	Dead Code Elimination

#### L01 - Public Function could be Declared External

Criticality	minor
Location	contract.sol#L869,L860,L856 and 13 more

#### Description

Public functions that are never called by the contract should be declared external to save gas.

reflectionFromToken deliver totalFees

#### Recommendation

Use the external attribute for functions never called from the contract

#### L02 - State Variables could be Declared Constant

Criticality	minor
Location	contract.sol#L733

#### Description

Constant state variables should be declared constant to save gas.

\_contentWalletAddress

#### Recommendation

Add the constant attribute to state variables that never change.

# L04 - Conformance to Solidity Naming Conventions

Criticality	minor
Location	contract.sol#L759,L758,L749 and 14 more

#### Description

Solidity defines a naming convention that should be followed. Rule exceptions:

- Allow constant variable name/symbol/decimals to be lowercase.
- Allow \_ at the beginning of the mixed\_case match for private variables and unused parameters.

```
numTokensSellToAddToLiquidity
_maxTxAmount
_liquidityFee
...
```

#### Recommendation

Follow the Solidity naming convention.

https://docs.soliditylang.org/en/v0.4.25/style-guide.html#naming-conventions

#### L09 - Dead Code Elimination

Criticality	minor
Location	contract.sol#L235,L173,L213 and 12 more

#### Description

Functions that are not used in the contract, and make the code's size bigger.

```
mod
div
_msgData
...
```

#### Recommendation

Remove unused functions.

### Summary

Moontent is aiming to build a crypto based digital content marketplace. The owner has the ability to mint and burn the contract's tokens. The token owner has acknowledged that the minting and burning functionality is required for the contract bridging. Apart from this, there are some functions that can be called by the owner but there are limitations to what they can change. The maximum fee percentage that can be set is 25%. A multi-wallet signing pattern will provide security against potential hacks. Temporarily locking the contract or renouncing ownership will eliminate all the contract threats.
