Initial Audit	12/07/2021
Corrected	

Contract Analysis

Contract contains Delegatecall to Untrusted Callee

The contract is calling another Contract Function in Solidity. That means that it can execute code dynamically that has not been audited.

Delegatecall is identical to a message call apart from the fact that the code at the target address is executed in the context of the calling contract and msg.sender and msg.value do not change their values.

This means that a contract can dynamically load code from a different address at runtime. Storage, current address and balance still refer to the calling contract, only the code is taken from the called address.

Pass	Description
✓	Contract Owner is not able to mint new tokens
✓	Contract Owner is not able to burn new tokens
✓	Contract Owner is not able to increase fees more than a reasonable percent
✓	Contract Owner is not able to stop or pause transactions
✓	Contract Owner is not able to transfer tokens from specific address
✓	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
✓	Contract Owner is not able to blacklist wallets from selling

Contract Diagnostics

Pass	Name
✓	Integer Underflow
✓	Parity Multisig Bug
✓	Callstack Depth Attack
✓	Transaction-Ordering Dependency
✓	Timestamp Dependency
✓	Re-Entrancy

Summary

Contract contains Delegatecall to Untrusted Callee

MetaSwap Gas is an interesting project with a friendly and growing community. They aim to create a P2P swap, on BSC, ETH and Polygon chain. The contract analysis showed no compiler errors or critical issues. The Owner has limitations to what he can change (like fees) to protect the users from abuse and malicious activities. **The contract contains Delegatecall to untrusted callee. That means that it can execute code dynamically that has not been audited.** Finally, KYC or doxxing the team is advised in order to gain confidence and trust from the community.
