Contract Review

Contract Name	JOKECOMMUNITY
Compiler Version	v0.6.12+commit.27d51765
Optimization	200 runs
Licence	None
Explorer	https://bscscan.com/token/0x2df0c13487efdf4eb7f6c042273b7aca781b29a0
Symbol	JOKE
Decimals	9
Total Supply	7,350,000,000
Website	https://joke.community/

Audit Updates

Initial Audit	8th of December 2021
Corrected	

Contract Analysis

Pass	Description
✓	Contract Owner is not able to mint new tokens
✗	Contract Owner is not able to burn new tokens
✗	Contract Owner is not able to increase fees more than a reasonable percent (25%)
✗	Contract Owner is not able to stop or pause transactions
✓	Contract Owner is not able to transfer tokens from specific address
✓	Contract Owner is not able to increase the amount of liquidity taken by dev wallet more than a reasonable percent
✓	Contract Owner is not able to blacklist wallets from selling
✓	Liquidity Pool is locked

ST - Stop Transactions with Locked Flag

Criticality	high
Location	https://bscscan.com/address/0x2df0c13487efdf4eb7f6c042273b7aca781b29a0#code#L1234

Description

The contract owner has the authority to stop transactions. The owner may take advantage of it by setting the `locked` to zero.

```
function transferLock() public onlyOwner {
    locked = true;
}
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

ST - Stop Transactions with Max Amount

Criticality	high
Location	https://bscscan.com/address/0x2df0c13487efdf4eb7f6c042273b7aca781b29a0#code#L1063

Description

The contract owner has the authority to stop transactions for all users excluding the owner. The owner may take advantage of it by setting the `_maxTxAmount` to zero.

```
if(from != owner() && to != owner())
    require(amount <= _maxTxAmount, "Transfer amount exceeds the maxTxAmount.");
```

Recommendation

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

BT - Burn Tokens

Criticality	high
Location	https://bscscan.com/address/0x2df0c13487efdf4eb7f6c042273b7aca781b29a0#code#L1228

Description

The contract owner has the authority to burn tokens from a specific address. The owner may take advantage of it by calling the burn function. As a result the targeted contract address will lose the corresponding tokens.

```
function burn(address _from, uint256 _amount) public onlyOwner {
    _burn(_from, _amount);
}
```

Recommendation

The owner should carefully manage the credentials of the owner's account. We advised considering an extra-strong security mechanism that the actions may be quarantined by many users instead of one. The owner could also renounce the contract ownership for a period of time or pass the access to the zero address.

UIF - Unlimited Increase Fees

Criticality	high
Location	https://bscscan.com/address/0x2df0c13487efdf4eb7f6c042273b7aca781b29a0#code#L1008,L1014,L1020

Description

The contract owner has the authority to increase fees without limit. The owner may take advantage of it by calling the `setTaxFee` function with a high percentage value.

```
function setTaxFee(uint256 _newTaxFee) public onlyOwner {
    require(_newTaxFee != 0, "newTaxFee can not be Zero amount");
    _taxFee = _newTaxFee;
    _previousTaxFee = _taxFee;
}
```

Recommendation

The contract could embody a check for the maximum acceptable value.

The team should carefully manage the private keys of the owner's account. We strongly recommend a powerful security mechanism that will prevent a single user from accessing the contract admin functions. That risk can be prevented by temporarily locking the contract or renouncing ownership.

Contract Diagnostics

Pass	Name
✓	Integer Underflow
✓	Parity Multisig Bug
✓	Callstack Depth Attack
✓	Transaction-Ordering Dependency
✓	Timestamp Dependency
✓	Re-Entrancy

Summary

Joke is aiming to help comedians mint their jokes onto the blockchain as NFT's as well as run Virtual Comedy Clubs in the Metaverse. The contract analysis reported 3 critical issues. There are some functions that can be abused by the owner, like manipulating fees without limitations, stopping transactions and reducing the max amount of tokens a wallet can have without restrictions. A multi-wallet signing pattern or renouncing the ownership will eliminate all the contract threats. Finally, KYC or doxxing the team is advised in order to gain confidence and trust from the community.
